

# Adagio™ Installation Guide

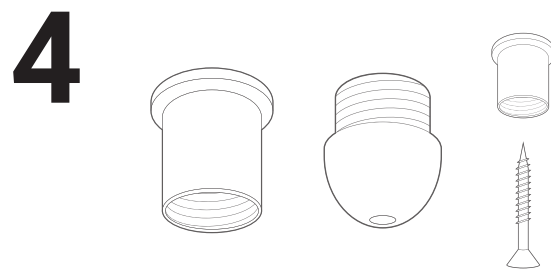

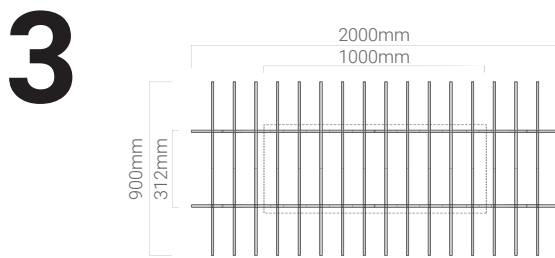

## Pack Contents

- 16 x Adagio cross sections
- 2 x Adagio spines
- 4 x 1m galvanised cables
- 4 x Ceiling mounts
- 4 x Cable clips
- 4 x Nylon tube insert

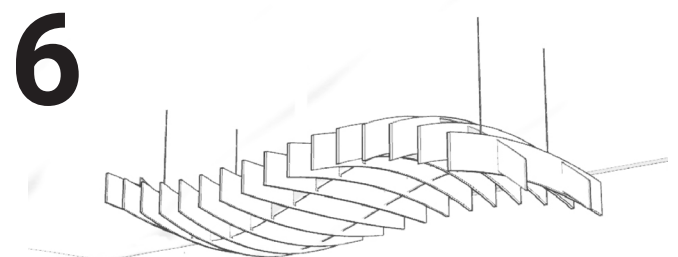

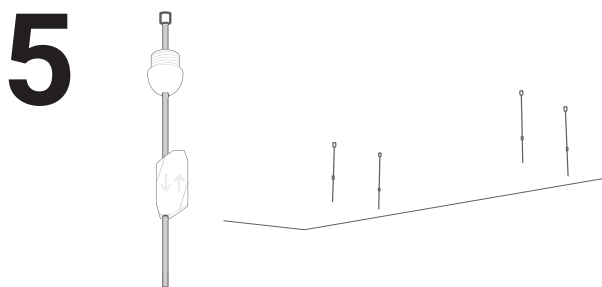

Layout the cross sections into two groups (upper and lower).  
The dimples on the center of the cross sections relate to their corresponding slot.

Lay the spines with the slots facing up and slot cross sections upper 8 and lower 8 into the spine. Ensure the tabs on the cross sections wrap around the spine. Continue with the other cross sections.

Determine where you want the structure to hang. Mark the ceiling mount points as shown in the diagram. Remove the round plugs in the pre-cut holes of the spines and replace them with the nylon inserts.

Separate the ceiling mounts into their individual parts (mounts and caps). Screw the ceiling mounts into the marked centres with a fixing appropriate for the substrate.

Thread the mount caps onto the cables, followed by the cable clips. Then screw the assembled cables into the fixed ceiling mounts.

Lift the Baffle to meet the cables, loop the wires through the nylon inserts and back through the clips. Once the baffle is hung use the cable clips to adjust the baffle to the correct height. Once set, trim the leftover cable.
