

MuteBoard® 4

Product Data.

MuteBoard® 4 is a high-performance, quad-layer acoustic panel designed to significantly reduce airborne sound transmission through both new and existing partition walls. This composite board features two mass loaded vinyl layers, a resilient 6mm closed-cell PE foam, and a 15mm acoustic plasterboard, all laminated into a single, installation-friendly unit. It delivers exceptional results in space-conscious settings where robust acoustic insulation is required.

Dimensions:	27mm x 1200mm x 1200mm
Sheet Size:	1.44 m ²
Mass:	25.5 kg/m ²
Sheet Weight:	37 kg

Features and Benefits:

- Four-layer build combines high-mass and resilient materials for efficient airborne noise reduction.
- Plasterboard surface ready for finishing with skim or plaster.
- Ideal for application to stud frames where space is limited.
- One complete board for quick and easy installation.
- Suitable for use in residential and commercial spaces targeting moderate to high sound insulation.
