

MuteMat® OSF 750-05

Product Data.

MuteMat® OSF 750-05 is a high-performance, slimline resilient acoustic underlay specifically engineered to reduce impact sound in concrete floor constructions. Manufactured from recycled rubber granulate, it delivers durable, long-lasting noise reduction with minimal compression, making it ideal for both new builds and retrofit applications. Its high density and flexibility allow it to support a broad range of floor finishes without compromising acoustic performance. Suitable for use both under screed and over screed applications.

Dimensions:	5mm x 1000mm x 10000mm
Roll Area:	10 m ²
Mass:	7.5 kg/m ²
Roll Weight:	37.5 kg
Density:	750 kg/m ³
Recycled Content:	92% recycled content, fully recyclable.

Features and Benefits:

- Excellent impact sound reduction performance for concrete floors.
- Pre-fabricated recycled rubber layer; eco-conscious and effective.
- Compatible with a wide variety of floor finishes.
- Retains shape and performance under high load; low permanent deformation.
- Suitable for refurbishment and retrofit installations.
- Can be installed under screed or directly beneath flooring (over screed).

Performance: Impact Reduction: ΔL_w 20 dB

Performance may vary depending on construction specifics. Refer to test data for full performance validation.
